

IILM UNIVERSITY, GREATER NOIDA

School of Computer Science and Engineering

INTERNSHIP PRESENTATION

Data Science Master Virtual Internship

STUDENT NAME	Arundhati Chauhan
ENROLLMENT NUMBER	2410030132
PROGRAM & SEMESTER	B.Tech (Computer Engineering), Semester 5
ORGANIZATION	Siemens (via AICTE–EduSkills Virtual Internship Program)

About the Organization

EduSkills Foundation

A non-profit organization working under the guidance of AICTE, Ministry of Education, Government of India — building an Industry 4.0-ready digital workforce and bridging the gap between academia and industry.

Delivered through the National Internship Portal, in partnership with leading technology organizations.

Siemens / RapidMiner

This internship track was supported by Siemens Industry Software, delivered on the RapidMiner data science platform — an enterprise-grade tool for data preparation, machine learning, and model deployment.

RapidMiner was acquired by Altair Engineering, which was subsequently acquired by Siemens.

Internship Program Overview

8

Weeks Duration

Apr–Jun

2026

100%

Online / Virtual

AICTE

Certified Program

Program Structure:

- Week-wise structured self-paced learning plan
- Weekly assessments to track progress and understanding
- Project documentation and assignment submissions
- Final Assessment Test in the concluding week
- Grading based on weekly performance, submissions, and final test

Internship Objectives

1

Business Problem Framing

Identify business problems suitable for AI and Machine Learning solutions.

2

Data Engineering

Access, load, transform, and calculate data using industry tools.

3

Machine Learning

Build foundational and advanced machine learning models.

4

Model Deployment

Deploy and monitor ML models in a production-like environment.

5

Platform Administration

Configure and manage RapidMiner AI Hub at enterprise scale.

6

Employability

Gain an industry-recognized credential that strengthens career readiness.

Week-wise Learning Curriculum

Week	Module	Focus
1	Applications & Use Cases – Professional	Identifying AI/ML-suitable business problems
2	Data Engineering – Professional	Accessing, loading, transforming data
3	Machine Learning – Professional	Foundational ML skills
4	Data Preparation – Master	Advanced data handling & automation
5	Machine Learning – Master	Advanced ML techniques
6	Applications & Use Cases – Master	Deploying & monitoring ML models
7	Platform Administration – Master	Configuring RapidMiner AI Hub
8	Platform Administration – Master	Enterprise operations + Final Assessment

Tools & Technologies Used

RapidMiner Studio

Visual, workflow-based environment for data access, transformation, and model building.

RapidMiner AI Hub

Deployment and management layer for enterprise-scale ML model governance.

EduSkills LMS

Learning Management System for course delivery, assessments, and progress tracking.

Machine Learning Concepts

Supervised learning techniques applied through model-building exercises.

Data Engineering Principles

Data access, cleaning, transformation, and calculation workflows.

Platform Architecture & Workflow

RapidMiner Studio handles data engineering and model building; RapidMiner AI Hub manages deployment, monitoring, and enterprise-level governance; RapidMiner Go enables quick, no-code sharing of predictive applications. Together they form the end-to-end pipeline followed across the 8-week curriculum.

Skills Gained & Outcomes

- ✓ End-to-end understanding of the data science lifecycle — from problem framing to deployment
- ✓ Hands-on proficiency with RapidMiner Studio and RapidMiner AI Hub
- ✓ Improved employability through an industry-recognized certification
- ✓ Strengthened analytical and problem-solving skills applicable to future coursework and roles
- ✓ Exposure to enterprise-grade tools used by Siemens/Altair in real industry settings

Certificate of Completion

Conclusion

The Data Science Master Virtual Internship, delivered through the AICTE–EduSkills program and supported by Siemens, provided structured, hands-on exposure to the complete data science lifecycle using the RapidMiner platform. Over eight weeks, the program strengthened both foundational and advanced skills in data engineering, machine learning, model deployment, and enterprise platform administration — complementing academic learning with practical, industry-relevant experience and improving overall employability.

Thank You
